BULLETIN #7 - LEAKING AT THE CORNERS

DOOR SOLUTIONS

FAQ: What if my door unit leaks?

- 1: Ask the installer what kind of caulking was used underneath the sill. If unit was installed without caulking, remove and re-install unit. Caulking can be added to both sides as a temporary measure.
- 2: Is the door unit square in the opening?
- **3:** Is there adequate overhang to prevent direct rain/weather onto the door surface?

RECOMMENDED OVERHANG

The "Projection of Overhang" must measure a minimum of 1/2 the height of the entryway. The "Side of Overhang" must measure a minimum of three feet from the outside edge of the door unit. The overhang must provide protection of the door unit from direct exposure to the elements.

Note: Additional protection can also be added by installing "Door Corner Seals". These can readily be purchased from Amazon or other stores.
