

Condensation on Doors & Windows

Condensation is a natural phenomenon. When cold weather sets in, condensation can appear on doors and windows. This condition is the result of high humidity and low temperatures. The condition is not covered under warranty from door and window manufacturers, as the root of the problem is high humidity inside the home. Solutions include adding a dehumidifier and contacting your HVAC professional. Also see below for additional explanations and solutions.

Here are some websites with more detailed explanations of how condensation works and suggestions for reducing:
