

FAQ: What if my door unit leaks?

- 1:** Ask the installer what kind of caulking was used underneath the sill. If unit was installed without caulking, remove and re-install unit. Caulking can be added to both sides as a temporary measure.
- 2:** Is the door unit square in the opening?
- 3:** Is there adequate overhang to prevent direct rain/weather onto the door surface?

Note: Additional protection can also be added by installing "Door Corner Seals". These can readily be purchased from Amazon or other stores.
